## Product Overview

---

The BigFix Decision Support System Software Asset Management (DSS SAM) application is a comprehensive tool used to identify under-utilized software, track software usage patterns and trends, and detect over-used software licenses to maintain compliance with license agreements.

Product documentation for DSS SAM includes an *Installation and Configuration Guide*, *Software Catalog Editor's Guide*, *Software Catalog Visual Guide*, *User's Guide*, *End User QuickStart*, *Implementation Guide*, and *Release Notes*. Electronic versions of these resources are available in PDF format on the [documentation page](#) of the BigFix website.

To purchase or download product updates, first check the BigFix website to determine if an upgrade is available. Go to [www.bigfix.com](http://www.bigfix.com) and click on the Products link.

## System Requirements

---

- The DSS SAM application must be installed on a Microsoft Windows 2003 Server (32-bit or 64-bit) or a Microsoft Windows 2008 server (32-bit or 64-bit). This will be your target application server.
- BigFix Server version 7 must be available in your environment. The BigFix DSS SAM application may be installed on the same server, or on a separate server.
- SQL Server 2005 or 2008 (32-bit or 64-bit) with TCP/IP must be available in your environment. This server may be on the same computer as the DSS SAM application or on a separate server. You may use the same database server used for the BigFix Server, or a separate database server, depending on the size of your deployment and available hardware resources. This version of DSS SAM supports all editions of SQL Server 2005 and 2008.
- SQL Server Browser is needed if you are using a named instance rather than the default instance of SQL Server. It is also needed by the Configurator to enumerate named instances in the server's combo box on the SQL credentials panel.

### SQL Server Required Components

Component	Required by DSS SAM
SQL Server 2005 or 2008	Yes
SQL Server Active Directory	No
SQL Server Agent	No
SQL Server Browser	Yes
SQL Server Full Text Search	No
SQL Server VSS Writer	No

- Users and Administrators of the DSS SAM application must use Internet Explorer version 7 or FireFox version 3 (or later versions) and Adobe Flash version 10 (or later) to access the application. Your browser needs to have cookies enabled in order to run the application properly.
- To generate PDF format reports (in addition to CSV), you must have the Java JDK version 1.4 or higher (Java Development Toolkit) on your DSS SAM Server. (Note: This is different than Java Runtime Environment.) Access Java JDK from Sun's website: <http://www.sun.com/download/index.jsp> or <http://java.sun.com/javase/downloads/index.jsp> to download the latest JDK. If JDK is not installed, all DSS exports will use the CSV output rather than PDF. For specific installation instructions, go to the BigFix [Knowledge Base](#).

### User Accounts and Access Recommendations

During installation and configuration, you will be asked for usernames and passwords. Each stage of the installation (which installs different components) may require a user with different permissions. Use the table below to determine which username to use according to your stage of the installation process:

- Stage 1** – Subscribe to the Content Site
- Stage 2** – Install the DSS SAM application
- Stage 3** – Configure the services that run the software
- Stage 4** – Configure the connection from the DSS SAM application to the databases

Stage	Account Requirements	Type
1. Subscribe to DSS SAM Content Site	BES Operator login with permissions to subscribe to content sites	BES Operator
2. Install DSS SAM	Administrator for the O/S where you're installing DSS SAM  *Note: A non-administrator may be able to run the Configurator, but this may result in an error.	Domain or local
3. Configure the services that run DSS SAM and connect to the databases	Service account with db_datareader permissions on BES DB and read permission to the BigFix server upload manager directory	Domain
4. Create the DSS SAM databases	Specify using the service account with Administrator permissions on the database server, or User with SQL Authentication with Administrator permissions on database server.  *Note: If you revoke these permissions after the installation is complete, be sure to grant them again during an upgrade.	Domain  SQL

For additional guidance on user accounts and access, check the [Knowledge Base](#) on the BigFix support site.

## Deployment Sizing Requirements

The DSS SAM application is designed to run in a variety of deployment configurations, depending on the size and architecture of your system and how you intend to use the application. Sizing requirements and hardware specifications will vary according to your configuration.

Consider the following factors to ensure the correct component processing speed, RAM, and disk space to accommodate your BigFix Client capacity:

- The number of users accessing the DSS SAM application will determine how much processing power and RAM your server must have.
- The number of BigFix Clients will determine the amount of disk space required for files and for the database server.

**Note:** If you are using SQL Server Express Edition, see the Microsoft website for size limitations.

For a two-computer server configuration, 1MB per BigFix Client should be allocated on the BigFix Server split between files and the database, and 1-2MB per BigFix Client on the DSS SAM application system, also split between files and database.

For example, 10,000 BigFix Clients would require 10GB of free space on the BigFix Server, and 10-20GB free space on the DSS SAM application machine. This scenario would require the BigFix Server database to be on the same machine as the DSS SAM application. For sizing requirements on other deployment configurations, see the Appendix.

## Hardware Specifications

The values listed below are recommended hardware specifications that will provide optimum performance for similar sized deployments of the DSS SAM application. If your deployment will include over 20 DSS SAM application users, consider augmenting your hardware specifications to the next higher scale, or contact BigFix Technical Support for assistance with hardware selection.

For best performance, consider the following recommendations:

Deployment Size	CPU	Memory	Hard Disks
< 250	2-3 GHz	1 GB	Standard HD
1,000	2-3 GHz - 2 Cores	2 GB	1 RAID Array (RAID 10, 5)
10,000	2-3 GHz - 2-4 Cores	4 GB	1-2 RAID Arrays (RAID 10)
50,000	2-3 GHz - 4 Cores	8 GB	2 RAID Arrays (RAID 10)
100,000	2-3 GHz - 4-8 Cores	12 GB	3 RAID Arrays (RAID 10)
> 200,000	2-3+ GHz - 8-16 Cores	16+ GB	3-4 RAID Arrays (RAID 10)

RAID arrays must support use of the disk cache for both reading and writing. The disk cache should be set to 50/50 read write.

# New Catalog Titles

The following table includes additional publishers, software titles and software title versions that have been added to the Software Catalog component of DSS SAM 1.1.2. Check your Software Catalog audit log to determine if there are any conflicts in your existing Catalog introduced by this update.

Publisher Name	Software Title Name	Software Title Versions
Acolada GmbH	Brandstetter UniLex	Brandstetter UniLex 1
Acronis Inc.	Acronis Disk Director	Acronis Disk Director 10
Acronis Inc.	Acronis Disk Director	Acronis Disk Director 9
Adobe Systems Incorporated	Acrobat Reader	Acrobat Reader 9
Adobe Systems Incorporated	Adobe Photoshop	Photoshop 8
Adobe Systems Incorporated	Adobe PressReady	Adobe PressReady 1
Adobe Systems Incorporated	Adobe Soundbooth	Adobe Soundbooth CS3
Adobe Systems Incorporated	ColdFusion	ColdFusion 3
Adobe Systems Incorporated	ColdFusion	ColdFusion 4
Adobe Systems Incorporated	ColdFusion	ColdFusion 5
Adobe Systems Incorporated	ColdFusion	ColdFusion 7
Adobe Systems Incorporated	ColdFusion	ColdFusion 8
Adobe Systems Incorporated	RoboHelp Office	RoboHelp Office 13
Adobe Systems Incorporated	RoboSource Control	RoboSource Control 2
Adobe Systems Incorporated	Shockwave Player	Shockwave Player 10
Adobe Systems Incorporated	Shockwave Player	Shockwave Player 11
Adobe Systems Incorporated	Shockwave Player	Shockwave Player 8
Advanced Structural Concepts Inc.	NONLIN	NONLIN 6
Applied Micros Pty Limited	Multilog Pro	Multilog Pro 9
ARM Software	MacroMaker	MacroMaker 1
ARM Software	MacroMaker	MacroMaker 3
Avira GmbH	AntiVir Desktop	AntiVir Desktop 9
Behavioral Science Technology Inc.	BAPPTTrack Enterprise Edition	BAPPTTrack Enterprise Edition 2
BestSecurityTips LLC	Sakina Privacy Protector	Sakina Privacy Protector 2
Betamax GmbH & Co.Kg	Nonoh	Nonoh 4
Bienne Soft	YouTube Downloader	YouTube Downloader 2
Binary Fortress Software	iTunes Sync	iTunes Sync 1

BOSS International Inc.	HEC-RAS Professional	HEC-RAS Professional 3
Boxer Software	Boxer Text Editor	Boxer Text Editor 10
Brady Worldwide Inc.	MarkWare	MarkWare 2

Zaval Creative Engineering Group	Zaval JRC Editor	Zaval JRC Editor 2

# Resolved Issues

The following table highlights Known Issues that have been **resolved** in DSS SAM version 1.1.2:

Issue	Description
29544	An error in the catalog import step of the 1.1.1 upgrade causes all user-customized catalog entries to be lost. This affects upgrades from all versions to 1.1.1 and may only be recovered by restoring to a database snapshot from before the upgrade.
26784	In the DSS SAM dashboard, the "Sick" computers drill down misses computers in certain states.
23818	Need more comprehensive identification of OS versions and editions inventory.
20091	SAM Scanner may not index some files on 64-bit operating systems.
28179, 29125	SAM Scanner may not run to completion under certain conditions where there are locked files or where there are severe physical and swap memory limitations.
20228	Upload Manager: Client max archive size, server/relay buffer dir and compressed file max size all have a max value of 2 <sup>31</sup> -1.
27167	Date value is parsed incorrectly for Saved Reports tab, which causes data to show incorrect format for Saved Report.
27144	When you have more than one datasource, you need to reset import sequences to populate the data for a new Computer Property for all datasources except the first datasource.
26750	In the Contract Import Wizard, selecting column mappings and then checking (or unchecking) the "contains header row" checkbox, all column mappings on the unsaved form get reset.
22479	Exporting to CSV may prompt for an IE ActiveX block, and clicking Accept may not work.
23144	In extremely rare circumstances, the import process (specifically, BulkLoad.exe) will fail because another process has a lock on a file it needs to read.
28691	The Installed Applications analysis doesn't report 64 bit applications.
22234	Service Accounts for services are not created correctly.
26441	There is no way to add a publisher without adding an executable - cumbersome if using a definitive package and have no executable.
26624	Contract Import: Can't import a contract based on STV ID rather than STV Name.
26814	When creating a datasource, a misleading message may appear (for example: "Invalid exe scan directory"). The directory may in fact be valid, but the user does not have read-permissions to it.
26825	Catalog search by name must be restricted to visible entries.
26831	UI corruption in saved report list when cloning a report.
27204	An exe on the Raw Executable Scan Data tab of Computer Details shows the Add link, but when clicking on Add to start the workflow, the exe already exists .

27216	Control Panel/Roles: not able to create a new custom role.
27248	Need better handling of SQL Server errors when issuing RECONFIGURE command during installation, when pre-existing SQL Server configuration changes have not yet been committed.
27260	Need to improve usability of resetting import sequences and running a new import.
27297	Uninstalling DSS SAM does not remove all DSS registry keys.
27307	During upgrade, the upgrade configurator fails if service username does not use DOMAINUSER convention.
27383	Saving ETL schedule without changing start hour shows 12:XX but saves as 00:XX.
27603	Install configurator can crash when checking services if the user is not an Administrator.
28601	In certain circumstances, it is possible to add an executable to the Catalog when it already exists.

# Known Issues

Please review the contents of this list prior to contacting BigFix Support or reporting new issues.

Issue #	Severity	Category	Description	Workaround
19761	High	BigFix Server	Executable inventory does not aggregate to a single parent server in a BigFix DSA (Distributed Server Architecture) configuration, nor does the data replicate across all DSA servers, so inventory will be incomplete when using DSS SAM in an environment with DSA.	Configure DSA so that all computers report to a single root server rather than reporting dynamically to the various DSA servers. The implication is that although the BigFix database will replicate across DSA servers, the clients will not load balance across multiple root servers. Alternatively, you can contact BigFix for assistance with replicating the inventory data to a centralized location for DSS SAM.
22469	High	Import	If an import is interrupted, the application will continue to allow users to log in even though there may be inaccurate data due to the incomplete import.	Re-run the import and let it complete.
28761	Medium	UI	Computer Details: For executables designated as 'ambiguous', the 'Add' link appears even though it is already there.	Be sure to use the Ambiguous Entries tool to ensure your Catalog meets your expectations.
28858	Medium	Export	Within the Saved Reports tab, exporting a saved report with the time filter causes a DB exception.	To export a report with a time filter, view the Report Results and click Export.
21675	Medium	Export	PDF becomes unreadable with larger number of columns.	Use landscape view for the export to fit more columns. Ensure that the number of columns in view is not excessive.
21902	Medium	Installer	Once the Configurator has been run, it is not easy for the user to reconfigure the settings (Services and Database).	If you would like to reconfigure services and databases, please check the BigFix Knowledge Base for information or contact BigFix Support.
22897	Medium	Installer	Selecting a valid database server from drop down list on the Database Settings screen during installation will sometimes fail.	Ensure that the database server name and database name (if using a named instance) is correct. You may have to manually enter the name if it does not appear correctly in the dropdown list.
23281	Medium	Import	When deleting a datasource and then re-adding the same datasource, any existing custom retrieved properties lose their way.	After deleting a datasource, you should remove all custom retrieved properties. You may re-add them after re-adding the datasource, and then run an import to re-populate the data.

27796	Low	Import	If EXE scan directory becomes invalid, an error will be displayed and the user may be prevented from editing the exe scan directory information.	Recreate the original exe scan directory. If this is not possible, check the BigFix Knowledge Base for information or contact BigFix Support.
27931	Low	Installer	The installer does not check that the server computer is running one of the supported operating systems (Windows Server 2003 or Windows Server 2008).	Check the System Requirements in the Installation and Configuration Guide to see if your operating system is supported.
27947, 27729	Low	Catalog	It is possible to add an entry in the Catalog that is a duplicate of other entries.	Before adding to the Catalog, search for the item that you want to add to make sure it does not already exist. You may use the Ambiguous Entries tool to ensure your new items have not created any duplication.
28361	Low	Configurator	During installation, certain configurations may result in the following error: "An error occurred connecting to the SQL server utility using TCP/IP. Ensure TCP/IP is enabled for the server." This may be an erroneous message.	First ensure that TCP/IP is enabled for your SQL server. Also ensure that you are using the SQL server port number for the server you are connecting to using the following convention: "Server name,port number".
28599	Low	Catalog	If you use the Add link to initiate the Add to Catalog workflow from the Computer Detail page, the Add link will persist until the next import.	Manually run an import, or wait until the next scheduled import. Then the Add link will change to reflect the newly-added Catalog entry.
28776	Low	Configurator	Configurator doesn't catch a space left between comma and port number in database server name.	Use the following convention: "Server Name,port number".
19893	Low	UI	On the Computer detail screen, properties with multiple values on the "BES Properties" tab only display the first value.	You may add the desired properties as Computer Properties in DSS SAM for better usability, or you may use the BES Console to access this data.
20567	Low	DSS Cron	DSS Cron job pops up cmd prompt window on DSS SAM server every 5 minutes.	Create a shortcut to cron.bat. Get properties for new shortcut. Set properties for new shortcut to Run "minimized". Make sure the DSS Windows scheduled task is configured to run the shortcut. This will cause the bat to show in the tray for a second, but then it goes away when it's done running. No DOS window.
20592	Low	Import	If two datasources point to redundant DSA servers, the inventory will be redundant.	If you have multiple datasources, you should ensure that they are not replicated DSA servers.
21119	Low	Installer	SSL certificates are properly used when configuring DSS SAM to run in https mode, but the configuration process does not validate that the SSL certificate is valid during the install.	Ensure that you have a valid SSL certificate before you use it for the DSS SAM configuration. If you install using an invalid certificate, your DSS SAM server may not run properly. In this case, please

				check the BigFix Knowledge Base for information or contact BigFix Support.
21215	Low	Installer	Configuration wizard UI appears to be unresponsive during scripted actions, but it continues to install.	
22049	Low	Java/JDK	Without Java on the DSS server, PDF export will not be available to end users and there is no warning.	Install JDK on the DSS server and restart all your BigFix DSS services. Please check the BigFix Knowledge Base for information or contact BigFix Support for more information.
22393	Low	UI	Cannot change column size if column size is bigger than window size.	Clear your browser cache (including cookies) and reload the browser page to reset the column widths.
23362	Low	UI	Deleting BES group does not delete it from existing listings in DSS SAM Computer Group.	Delete removed BES groups from DSS SAM UI.
27156	Low	DSS SAM Server	If you already have Ruby on Rails installed on your DSS SAM server when you install DSS SAM, DSS SAM may install correctly, but fail to run.	You may need to edit Windows Environment Variables to direct the DSS SAM Ruby code to the correct Ruby executables and libraries.
26418	Low	Import	Changes to Computer Groups don't show in Filters & Columns right away.	Need to run Import.
27145	Low	UI	Some browsers may cache the Filters & Columns dialog, so after you add a Computer Property you need to refresh the screen or logout/login before that property appears in the dialog.	Refresh your browser screen or logout and login.
26929	Low	Installer	Installer shows "Show the Windows Installer log" checkbox, but it is not functional.	
28762	Low	Import	When only one datasource is configured and that datasource is deleted, data is not erased from the Drill Down by Software tab.	The data will be replaced after you add a new datasource and run an import.
28876	Low	Import	When using compressed scan file uploads, the ETL log contains erroneous warnings about malformed exe scan data.	These warnings are safe to ignore.

# Global Support

---

BigFix offers a suite of support options to help optimize your user-experience and success with this product. Here's how it works:

- First, check the BigFix website [Documentation](#) page.
- Next, search the BigFix [Knowledge Base](#) for applicable articles on your topic.
- Then check the [User Forum](#) for discussion threads and community-based support.

If you still can't find the answer you need, [contact](#) BigFix's support team for technical assistance:

- Phone/US: (866) 752-6208 (United States)
- Phone/International: (661) 367-2202 (International)
- Email: [enterprisesupport@bigfix.com](mailto:enterprisesupport@bigfix.com)
