Included Software Catalog

- This release includes Software Catalog version 10.0.12.2 with capability to discover 500+ new software versions including but not limited to the following software manufacturers: Oracle, Citrix, Microsoft, Google Inc., RED HAT, VMware, Micro Focus, SAP, Symantec, Palo Alto, Hewlett-Packard, Intel, and Dell

New template signatures included in this release:

Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.

Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. New catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behaviour includes specific notes (for details refer to the list of enhancements and list of defects).
