### Included Software Catalog

This release includes Software Catalog version 10.0.14.1 with capability to discover 100+ new software versions including but not limited to software manufacturers like Oracle.

New template signatures included in this release:

*Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.*

Publisher Name	Component Name	Platform
Outbyte Computing	Outbyte PC Repair	WINDOWS
Scott Brogden	Ditto	WINDOWS
Bank Of Maharashtra	MahaSecure	WINDOWS
Codejock Software	Xtreme ToolkitPro	WINDOWS
Dynamsoft	Dynamsoft Barcode Reader SDK	WINDOWS

Roche	LightCycler 96	WINDOWS
Skyworks	ClockBuilder Pro	WINDOWS
Tangible Software Solutions	Java to Python Converter	WINDOWS
babelfor.NET	Babel Obfuscator	WINDOWS

Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. New catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details refer to the list of enhancements and list of defects).

## Publisher normalization

Starting from BigFix Inventory 10.0.13.2, Publisher data is improved with simplified data filtering and reporting. This is a continuous process, and the next changes will be provided in future catalog updates. The changes include updating existing publisher names to current ones, and deduplicating publishers as well as covering acquisitions.

In case a publisher does not exist anymore, and it was used in catalog customization then it remains in the catalog report.

The change also means that only the publisher in the second column remains. Thus, existing custom reports may require adjustment to use current Publisher information.
