Included Software Catalog

This release includes Software Catalog version 20240508 with capability to discover 270+ new software versions including but not limited to the following software manufacturers: Adobe, Oracle, and SAP

New template signatures included in this release:

Template signature is a method of discovery where the version of a component is detected automatically, and specific version added to the catalog on fly. Such template signatures include all component versions. They are used when the software is frequently updated and deployment method is not changed.

✎ Changes made to the software component definition in the catalog (e.g., modification of component name, version, or publisher) may cause the creation of a new definition of the component and the removal of the previous one. This leads to loss of Tagging, Classification and in some cases also custom EOS information.
Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. The new catalog must be propagated to the endpoints before the scan is executed.

The updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title, refer to the list of enhancements, ideas implemented, and list of defects).
