**IMPORTANT:** Changes related to the catalog update process

*Starting from 20240612 release, Catalog updates are available from a new BigFix Inventory Discovery site, and BigFix Inventory server version 11.x is required for all subsequent catalog releases.*

If you already upgraded to BigFix Inventory server v11, then verify if your BigFix Inventory server v11 is not impacted by specific issues [BigFix Inventory: Application Update 11.0.0.0 build 20240820-1428 published 2024-08-27 - Release Announcements / Inventory (Release Announcements) - BigFix Forum] Apply related hotfixes if necessary, before updating the catalog.

If your BigFix Inventory server version is less than V11, then upgrading the BigFix Inventory server to version 11 is required

Contact support if specific discovery gaps are noticed in reports before and after catalog updates.

## Software Catalog

This release includes Software Catalog with capability to discover 170+ new software versions including but not limited to the following software manufacturers: Citrix, Microsoft & Oracle.

New template signatures included in this release:

*Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.*

Publisher Name	Component Name	Platform
Citrix	Citrix Workspace Environment Management Agent	WINDOWS
Bluebeam software Inc.	Revu	WINDOWS
Microsoft	BG info	WINDOWS
Microsoft	Debug Diagnostics tool	WINDOWS
Microsoft	Microsoft .NET core SDK	WINDOWS
Microsoft	Microsoft Access Database engine	WINDOWS
LINE Corporation	LINE Desktop	WINDOWS
EMC Corporation	ApplicationXtender Desktop	WINDOWS
Digital Identification Solutions	EDIsure Connect	WINDOWS
Equitrac Corporation	Equitrac Office Client	WINDOWS
Microsoft	Microsoft Database Engine Tuning Advisor	WINDOWS
Microsoft	Microsoft Application Virtualization Client	WINDOWS
Microsoft	Microsoft Azure DocumentDB	WINDOWS
Microsoft	Microsoft Dynamics 365 Business Central	WINDOWS
Microsoft	Microsoft Dynamics 365 Server	WINDOWS

 Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. New catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).
