IMPORTANT: Changes related to the catalog update process

Starting from 20240612 release, Catalog updates are available from a new BigFix Inventory Discovery site, and BigFix Inventory server version 11.x is required for all subsequent catalog releases.

Upgrading the BigFix Inventory server to version 11 is required to activate the catalog import option. Previous versions of BigFix Inventory server will ignore new catalogs during import time.

License Mapping & Software Categorization through Artificial Intelligence

Now the catalog includes Software product license types & Software component categories details. This data is powered by Artificial Intelligence (AI) and verified in-house for selected vendors to provide accuracy close to 90%.

The BigFix Inventory v11.0.2.0 reports are enhanced with this information to help with license compliance and optimization scenarios.

Software Catalog

This release includes Software Catalog with capability to discover 110+ new software versions including but not limited to the following software manufacturers like Adobe, Broadcom, Microsoft, Oracle & Salesforce.

New template signatures included in this release:

Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.

Publisher Name	Component Name	Platform
Microsoft	SQL Server Data Quality Client	WINDOWS
Altova	Altova XMLSpy	WINDOWS
PortSwigger	Burp Suite Professional Edition	WINDOWS
Salesforce	Tableau Prep Builder	WINDOWS
Finastra	Finastra Fusion Sophis	WINDOWS
Fiserv CWS	Financial Crime Risk Management	WINDOWS
JetBrains	JetBrains dotPeek	WINDOWS
JetBrains	JetBrains dotMemory	WINDOWS
JetBrains	JetBrains dotTrace	WINDOWS

Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. New catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).
