

## BigFix Inventory Catalog 20250927 Release Notes

This table provides information about the BigFix Inventory software catalog update 20250927. The update is cumulative and contains changes that were provided in the previous updates.

Name of the component	Version	Updated in this Release
BigFix Inventory Discovery Site	27	Yes
BigFix Inventory Server Software Catalog	20250927	Yes
BigFix Inventory Scanner Software Catalog - Major	2638959	Yes

### License Mapping & Software Categorization through Artificial Intelligence

Now the catalog includes Software product license types & Software component categories details. This data is powered by Artificial Intelligence (AI) and verified in-house for selected vendors to provide accuracy close to 90%.

The BigFix Inventory v11.0.2.0 reports are enhanced with this information to help with license compliance and optimization scenarios.

### Software Catalog

This release includes Software Catalog with capability to discover 150+ new software versions including but not limited to the following software manufacturers like AutoDesk, Dell, McAfee, Microchip, Oracle & SAP.

New template signatures included in this release:

*Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.*

Publisher Name	Component Name	Platform
AutoDesk	Autodesk Nastran	WINDOWS
AutoDesk	Autodesk Inventor Nastran	WINDOWS
Hexagon	MSC Nastran	WINDOWS
Microchip	maxView Storage Manager	WINDOWS & UNIX
Dell	Dell EqualLogic SAN HeadQuarters	WINDOWS
McAfee	McAfee Host Intrusion Prevention	WINDOWS
Wacom	Wacom Tablet	WINDOWS
Oracle	Oracle Forms Builder	WINDOWS

 Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. New catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).

### Deleted old software signatures to optimize standard catalog processing

This release includes improvement for catalog processing which is done by removing old software signatures from BigFix Inventory main catalog which results in better overall performance. Deleted signatures refer to software and versions with a very low probability of being active or deployed.

Additionally, the number of deleted versions has been streamlined to support transformation into a single template, enabling one signature to efficiently cover the discovery of multiple versions.

Deleted signatures are still available as custom catalog content for customers who request specific titles and versions through the standard support channel. For the list of deleted signatures, refer to the change list.

## Modified content

The following fixlets were updated and should be run to install the latest versions of the specific components:

- Server Software Catalog Update – version 20250927, 27/09/2025

## Enhancements and important changes

The following table lists enhancements and changes that are introduced in this update.
