BigFix Inventory Server Software Catalog	20251012	Yes
BigFix Inventory Scanner Software Catalog - Major	2638963	Yes

License Mapping & Software Categorization through Artificial Intelligence

Now the catalog includes Software product license types & Software component categories details. This data is powered by Artificial Intelligence (AI) and verified in-house for selected vendors to provide accuracy close to 90%.

The BigFix Inventory v11.0.2.0 reports are enhanced with this information to help with license compliance and optimization scenarios.

Software Catalog

This release includes Software Catalog with capability to discover 500+ new software versions including but not limited to the following software manufacturers like Acronis, Adobe, Apple, Avaya, BMC Software, Broadcom, Cisco, Citrix, Dell, Google, Hewlett-Packard, Logitech, Micro Focus, Microsoft, Open Text, Oracle, SAP, SAS & VMware.

As part of this catalog release, Discovery of 3 new software titles are added

New template signatures included in this release:

Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.

Publisher Name	Component Name	Platform
Broadcom	Symantec LiveUpdate	WINDOWS
Broadcom	Symantec LiveUpdate Administrator	WINDOWS
The R Foundation	R for Windows	WINDOWS
Bloomberg LP	Bloomberg communication server	WINDOWS
Martin Prikryl	WinSCP	WINDOWS
Any-Video-Converter.com	Any Video Converter	WINDOWS
Apple	Apple QuickTime	WINDOWS
Avaya	Avaya CMS Supervisor	WINDOWS

 Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. New catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).

Automatic signature creation using AI

This catalog update introduces new software signatures generated through the Automatic Signature Creation process powered by Artificial Intelligence (AI). This will continue as an ongoing enhancement in upcoming releases.

Added 350+ new signatures in this release as part of Automatic Signature creation.

Deleted old software signatures to optimize standard catalog processing

This release includes improvement for catalog processing which is done by removing old software signatures from BigFix Inventory main catalog which results in better overall performance. Deleted signatures refer to software and versions with a very low probability of being active or deployed.

Additionally, the number of deleted versions has been streamlined to support transformation into a single template, enabling one signature to efficiently cover the discovery of multiple versions.

Deleted signatures are still available as custom catalog content for customers who request specific titles and versions through the standard support channel. For the list of deleted signatures, refer to the change list.

Modified content

The following fixlets were updated and should be run to install the latest versions of the specific components:

- Server Software Catalog Update – version 20251012, 12/10/2025
