License Mapping & Software Categorization through Artificial Intelligence

Now the catalog includes Software product license types & Software component categories details. This data is powered by Artificial Intelligence (AI) and verified in-house for selected vendors to provide accuracy close to 90%.

The BigFix Inventory v11.0.2.0 reports are enhanced with this information to help with license compliance and optimization scenarios.

Software Catalog

This release includes Software Catalog with capability to discover 120+ new software versions including but not limited to the following software manufacturers like AutoDesk, Dell, Micro Focus & Oracle.

New template signatures included in this release:

Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.

Publisher Name	Component Name	Platform
angryziber	Angry IP Scanner	WINDOWS
Dell	Dell SupportAssist OS Recovery Plugin for Dell Update	WINDOWS
Trimble	SketchUp Viewer	WINDOWS
The PHP Group	PHP	WINDOWS
Rocket Software Inc.	Reflection FTP Client	WINDOWS
Box	Box Tools	WINDOWS
Datawatch Corporation	Datawatch Monarch Pro	WINDOWS
Altair Engineering	Altair Monarch	WINDOWS
CyberLink Corp.	CyberLink Media Suite	WINDOWS
Circle Systems	Stat/Transfer	WINDOWS

 Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. New catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).

Deleted old software signatures to optimize standard catalog processing

This release includes improvement for catalog processing which is done by removing old software signatures from BigFix Inventory main catalog which results in better overall performance. Deleted signatures refer to software and versions with a very low probability of being active or deployed.

Additionally, the number of deleted versions has been streamlined to support transformation into a single template, enabling one signature to efficiently cover the discovery of multiple versions.

Deleted signatures are still available as custom catalog content for customers who request specific titles and versions through the standard support channel. For the list of deleted signatures, refer to the change list.

Modified content

The following fixlets were updated and should be run to install the latest versions of the specific components:

- Server Software Catalog Update – version 20251030, 30/10/2025
