Software Catalog

This release includes Software Catalog with capability to discover 160+ new software versions including but not limited to the following software manufacturers like Adobe, AutoDesk, Citrix, Micro Focus, Microsoft, Open Text & Oracle.

New template signatures included in this release:
Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.

[pencil icon] Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.
Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. New catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).

Note: this information relates only to entries enlisted with the icon: [pencil icon]

Extended automation of license classification for BigFix products

This catalog update adds license bundling information and expands product definitions for the BigFix product family. These enhancements improve automated license classification, helping you understand BigFix license usage with minimal manual effort.

To benefit from these changes you need to follow these steps:

1. Import new Software Catalog on your BigFix Inventory Server
2. Run Data Import on BigFix Inventory Server
3. Run Fixlet 'Distribute site mapping' from site 'BES Support'
4. Run Fixlet 'Generate BigFix License tags' from site 'BES Support'

The Fixlet Generate BigFix License tags creates SWID tags on each BigFix endpoint to represent licenses used by the BigFix agent. BigFix Inventory uses these SWID tags together with product definitions in BigFix Inventory data to calculate BigFix license utilization.

Note: Each endpoint also contains a SWID tag used for BigFix endpoint inventory. This tag is not used for license calculation.

For further information, see the BigFix Inventory documentation:

Continuous Improvements

The BigFix Inventory Discovery team will continue to expand these definitions and bundling options in future updates based on ongoing analysis.
