

BigFix Inventory Catalog 20260308 Release Notes

This table provides information about the BigFix Inventory software catalog update 20260308. The update is cumulative and contains changes that were provided in the previous updates.

Name of the component	Version	Updated in this Release
BigFix Inventory Discovery Site	37	Yes
BigFix Inventory Server Software Catalog	20260308	Yes
BigFix Inventory Scanner Software Catalog - Major	2638990	Yes

Software Catalog

This release includes Software Catalog with capability to discover 230+ new software versions including but not limited to the following software manufacturers like Anthropic, AutoDesk, Cisco, Citrix, Hewlett-Packard, Micro Focus, Microsoft, Open Text, OpenAI & Oracle.

New template signatures included in this release:

Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.

Publisher Name	Component Name	Platform
Autodesk	Autodesk Desktop Connector	WINDOWS
Fluke	Fluke Connect	WINDOWS
Cisco	Cisco Web Communicator Add-On	WINDOWS
LM Studio	LM Studio	WINDOWS
LM Studio	LM Studio	LINUX
DITEC, a.s.	DLauncher	WINDOWS
Disig a.s.	Disig Web Signer	WINDOWS
LG Electronics	OnScreen Control	WINDOWS
Cloudera	Cloudera ODBC Driver for Hive	WINDOWS
Cloudera	Cloudera ODBC Driver for Hive	UNIX
Citrix	Citrix Session Recording Agent	WINDOWS
Anthropic	Claude	WINDOWS
Hewlett-Packard	HP Unified Functional Testing	WINDOWS
Hewlett-Packard	HPE Unified Functional Testing	WINDOWS
Micro Focus	Micro Focus UFT One	WINDOWS
Open Text	OpenText UFT One	WINDOWS
OpenAI	ChatGPT	WINDOWS

 Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. New catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).

Deleted old software signatures to optimize standard catalog processing

This release includes improvement for catalog processing which is done by removing old software signatures from BigFix Inventory main catalog which results in better overall performance. Deleted signatures refer to software and versions with a very low probability of being active or deployed.

Additionally, the number of deleted versions has been streamlined to support transformation into a single template, enabling one signature to efficiently cover the discovery of multiple versions.

Deleted signatures are still available as custom catalog content for customers who request specific titles and versions through the standard support channel. For the list of deleted signatures, refer to the change list.

Extended automation of license classification for BigFix products

As a reminder from the previous catalog release, the update introduced enhancements to the BigFix product family by adding license bundling information and expanding product definitions. These improvements help automate license classification and provide better visibility into BigFix license usage with minimal manual effort.

To benefit from these changes you need to follow these steps:

1. Import new Software Catalog on your BigFix Inventory Server
2. Run Data Import on BigFix Inventory Server
3. Run Fixlet 'Distribute site mapping' from site 'BES Support'
4. Run Fixlet 'Generate BigFix License tags' from site 'BES Support'

The Fixlet Generate BigFix License tags creates SWID tags on each BigFix endpoint to represent licenses used by the BigFix agent. BigFix Inventory uses these SWID tags together with product definitions in BigFix Inventory data to calculate BigFix license utilization.

BigFix Platform Agent Bundle Definitions

For this catalog, new bundle definitions for the BigFix Platform Agent to the BigFix Platform product have been incorporated. For previously discovered SWID tags, the bundling information will appear after some time.

Continuous Improvements

The BigFix Inventory Discovery team will continue to expand these definitions and bundling options in future updates based on ongoing analysis.

Modified content

The following fixlets were updated and should be run to install the latest versions of the specific components:
