This table provides information about the BigFix Inventory software catalog update 20260411. The update is cumulative and contains changes that were provided in the previous updates.

Name of the component	Version	Updated in this Release
BigFix Inventory Discovery Site	39	Yes
BigFix Inventory Server Software Catalog	20260411	Yes
BigFix Inventory Scanner Software Catalog - Major	2638996	Yes

Software Catalog

This release includes Software Catalog with capability to discover 200+ new software versions including but not limited to the following software manufacturers like Adobe, AutoDesk, Broadcom, Microsoft, & Oracle.

New template signatures included in this release:

Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.

Publisher Name	Component Name	Platform
Corel Corporation	MindManager	WINDOWS
Canon	CaptureOnTouch	WINDOWS
Flexera	Snow Inventory Agent	WINDOWS
Quest Software	Quest vRanger Backup and Replication	WINDOWS
DYMO	DYMO Label	WINDOWS
DYMO	DYMO QuickPrint	WINDOWS
DAX Studio	DAX Studio	WINDOWS
Open Broadcaster Software	OBS Studio	WINDOWS
Broadcom	Symantec Endpoint Protection	WINDOWS
Ping Identity	PingID	WINDOWS
Epson	Easy Photo Scan	WINDOWS
Rockwell	FactoryTalk Activation Manager	WINDOWS
Adobe	Fresco	WINDOWS
Gemini Data Loggers	Tinytag Explorer	WINDOWS

 Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. New catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).

The information below pertains to the previous catalog release

Extended automation of license classification for BigFix products

This catalog update adds license bundling information and expands product definitions for the BigFix product family. These enhancements improve automated license classification, helping you understand BigFix license usage with minimal manual effort.

To benefit from these changes you need to follow these steps:

1. Import new Software Catalog on your BigFix Inventory Server
2. Run Data Import on BigFix Inventory Server
3. Run Fixlet 'Distribute site mapping' from site 'BES Support'
4. Run Fixlet 'Generate BigFix License tags' from site 'BES Support'

The Fixlet Generate BigFix License tags creates SWID tags on each BigFix endpoint to represent licenses used by the BigFix agent. BigFix Inventory uses these SWID tags together with product definitions in BigFix Inventory data to calculate BigFix license utilization.

HCL AppScan Product Bundle Definitions

For this catalog, version 10.11 has been added for HCL AppScan Source and its six associated components.

Additionally, new bundle definitions and standalone product entries for the HCL AppScan product family have been incorporated for the following versions:

- HCL AppScan Standard (Releases 10.7 to 10.11)
- HCL AppScan Enterprise Server (Releases 10.7 to 10.10)
- HCL AppScan Enterprise Dynamic Analysis Scanner (Releases 10.7 to 10.10)
- HCL AppScan Static Analyzer Client (Release 8.0)

For previously discovered SWID tags, the bundling information will appear after some time.

Continuous Improvements

The BigFix Inventory Discovery team will continue to expand these definitions and bundling options in future updates based on ongoing analysis.
