BigFix Inventory Scanner Software Catalog - Major	2638999	Yes

Software Catalog

This release includes Software Catalog with capability to discover 150+ new software versions including but not limited to the following software manufacturers like Adobe, AutoDesk, Microsoft, Open Text, Oracle, & RED HAT.

New template signatures included in this release:

Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.

Publisher Name	Component Name	Platform
Adobe	Adobe Creative Cloud Libraries	WINDOWS
Postman	Postman	WINDOWS
Adobe	Adobe Substance 3D Sampler	WINDOWS
Adobe	Adobe Substance 3D Modeler	WINDOWS
Oracle	Oracle Container Runtime for Docker	LINUX

 Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. New catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).

Extended automation of license classification for BigFix products

As a reminder from the previous catalog 20260225 release, the update introduced enhancements to the BigFix product family by adding license bundling information and expanding product definitions. These improvements help automate license classification and provide better visibility into BigFix license usage with minimal manual effort.

To benefit from these changes you need to follow these steps:

1. Import new Software Catalog on your BigFix Inventory Server
2. Run Data Import on BigFix Inventory Server
3. Run Fixlet 'Distribute site mapping' from site 'BES Support'
4. Run Fixlet 'Generate BigFix License tags' from site 'BES Support'

The Fixlet Generate BigFix License tags creates SWID tags on each BigFix endpoint to represent licenses used by the BigFix agent. BigFix Inventory uses these SWID tags together with product definitions in BigFix Inventory data to calculate BigFix license utilization.
