

## BigFix Inventory Catalog 20260615 Release Notes

This table provides information about the BigFix Inventory software catalog update 20260615. The update is cumulative and contains changes that were provided in the previous updates.

Name of the component	Version	Updated in this Release
BigFix Inventory Discovery Site	43	Yes
BigFix Inventory Server Software Catalog	20260615	Yes
BigFix Inventory Scanner Software Catalog - Major	2639016	Yes

### AI Discovery

BigFix Inventory can now detect and inventory AI software across a broad range of emerging product categories, giving organizations full visibility into their AI tooling landscape.

The following new categories are supported:

- **AI Automation Agent** - detect robotic process automation and AI-driven workflow agents running in your environment
- **AI Web Browser Extension** - identify AI browser plugins
- **Local LLM Runtime** - discover locally deployed large language model runtimes
- **Desktop AI Assistant** - track AI assistants running as native desktop applications
- **AI Code Assistant** - inventory AI-powered coding tools such as IDE plugins and code completion agents
- **AI Productivity Add-in** - detect AI add-ins embedded in productivity suites
- **AI Web Browser** - identify standalone browsers with built-in AI capabilities
- **AI Gateway** - discover on-premises or local AI gateway and proxy software

This coverage expansion helps IT and compliance teams understand the full scope of AI tool adoption across the organization - including shadow AI - and supports license management, security review, and policy enforcement for these rapidly growing software categories.

The coverage for Windows and Linux is addressed with Catalog signatures and for MAC OS with catalog-less mechanism by the BigFix Inventory server. Refer to the Enhancement list section for details.

### Software Catalog

This release includes Software Catalog with capability to discover 400+ new software versions including but not limited to the following software manufacturers like Amazon, AutoDesk, Google, Microsoft, Open Text, Palo Alto Networks, Salesforce, & VMware.

This release also introduces a new Software Catalog feature, enabling users to discover 50+ new AI software titles from leading manufactures including Anthropic, Open AI, Perplexity, Google, Amazon, Microsoft, Windsurf and more.

New template signatures included in this release:

*Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.*

Publisher Name	Component Name	Platform
Microsoft	Microsoft 365 Copilot	WINDOWS
Gemini Data Loggers	Tinytag Explorer	WINDOWS
Perplexity	Perplexity AI	WINDOWS
Butterfly Effect	Manus	WINDOWS

AutoDesk	Autodesk Fusion	WINDOWS

 Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. The new catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).

### Modified content

*The following fixlets were updated and should be run to install the latest versions of the specific components:*

- Server Software Catalog Update – version 20260615, 15/06/2026

### Enhancements and important changes

The following table lists enhancements and changes that are introduced in this update.

**Note:** The "ALL" version label is used for those software components that update versions too frequently to track or lack their own internal versioning. Detailed component version for discovered software instance covers the details if such information is available.
