

BigFix Inventory Catalog 20260714 Release Notes

This table provides information about the BigFix Inventory software catalog update 20260714. The update is cumulative and contains changes that were provided in the previous updates.

Name of the component	Version	Updated in this Release
BigFix Inventory Discovery Site	44	Yes
BigFix Inventory Server Software Catalog	20260714	Yes
BigFix Inventory Scanner Software Catalog - Major	2639022	Yes
BigFix Inventory Server: IBM LMT Software Catalog	9.2.44.1	Yes (newly added)

IBM LMT Software Catalog

Starting from this release, a new Fixlet is provided to update the IBM LMT Software Catalog in a BigFix Inventory Server.

The IBM LMT Software Catalog 9.2.44.1 is available for BigFix Inventory 11.0.7 and 11.0.8.

To update the IBM LMT Software Catalog use the 'Server IBM LMT Software Catalog Update (9.2.44.1, for BFI 11.0.7 and 11.0.8)' Fixlet.

Only major IBM LMT Software Catalog changes are documented, and their details can be found in the IBM LMT What's new: <https://www.ibm.com/docs/en/license-metric-tool/9.2.0?topic=tool-whats-new>.

Software Catalog

This release includes Software Catalog with capability to discover 500+ new software versions including but not limited to the following software manufacturers like Adobe, AutoDesk, BellSoft, HCL, Hewlett-Packard, IBM, Intel, Microsoft, Open Text, Palo Alto Networks, SAP, & Siemens.

New template signatures included in this release:

Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.

Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.

Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. The new catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).
