Software Catalog

This release includes Software Catalog with capability to discover 250+ new software versions including but not limited to the following software manufacturers like Amazon, AutoDesk, Intel, Microsoft, NVIDIA, Open Text & Samsung.

New signatures included in this release:
Template signature is a method of discovery where the version of a component is detected automatically, and a specific version is dynamically added to the catalog. Such template signatures include all component versions. They are used when the software is frequently updated, and the deployment method has not changed. One template covers 10+ software versions.

Publisher Name	Component Name	Platform
AmN	YASB	WINDOWS
Canon	My Image Garden	WINDOWS
Cline	Cline	WINDOWS

Tricentis	Tricentis Tosca	WINDOWS

Changes made to the software component definition in catalog (e.g., modification of component name, version, or publisher) may cause creation of new definition of the component and removal of previous one. This leads to loss of Tagging, Classification and custom EOS information.
Additionally, when discovery is based on a signature evaluated on an endpoint, previous discovery results temporarily disappear until the next software scan and related data import. The new catalog must be propagated to the endpoints before the scan execution.

Updated discovery mechanism for specific software with this behavior includes specific notes (for details and impacted software title refer to the list of enhancements, ideas implemented and list of defects).
